Biography

I graduated from the University of Illinois at Chicago College of Pharmacy and completed postgraduate pharmacy residency training in hospital and emergency medicine at BWH in Boston, followed by a fellowship in clinical toxicology at the Arizona Poison and Drug Information Center in Tucson. I became a Diplomate of ABAT in 2022.

Currently, I work as a Clinical Pharmacy Specialist in the Emergency Department at BWH. In this role, I precept pharmacy students and residents on emergency medicine rotation, as well as Harvard-affiliated emergency medicine residents during their pharmacy rotation. I also precept pharmacy residents on toxicology rotations at BWH in collaboration with the MA&RI Poison Center at Boston Children's Hospital. During National Poison Prevention Week, I organize educational series for pharmacy department staff at BWH in collaboration with the poison center. In addition, I participate in monthly educational sessions with the Abu Dhabi Poison and Drug Information Center for poison center specialists and emergency medicine residents during their toxicology rotation.

Outside of work, I enjoy traveling, cooking, and exploring new restaurants and coffee shops in Boston.

Platform

Hello everyone, my name is Reem, and I am eager to serve on the ABAT Advisory Board because I am deeply committed to advancing clinical toxicology through education, collaboration, and advocacy. I am particularly passionate about training the next generation of toxicologists and supporting educational initiatives that prepare trainees to successfully sit for and pass the ABAT certification exam. In addition, I am interested in contributing to committee efforts related to credentialing, including strengthening pathways for international candidates while ensuring that eligibility standards remain rigorous, fair, and reflective of true expertise. I believe that maintaining high standards is critical to preserving the credibility and value of certification through ABAT. I am also dedicated to fostering member engagement, encouraging new diplomates to become actively involved, and enhancing the visibility of ABAT within the broader medical and pharmacy communities. Ultimately, I hope to support ongoing advocacy efforts that elevate the role of clinical toxicology and ensure our specialists are recognized for their distinct and essential contributions.
